SUPPORTING TEAMWORK  
IN DAILY CLINICAL PRACTICE

Wireless device  
designed to support  
dentists, dental  
assistants and front  
office staff, improving  
internal communication  
workflows.

# HEAD TRACKING MOUSE

**Fewer errors.**

**More efficiency.**

**Improved hygiene.**

## WHAT IT IS

Head Tracking Mouse is a wireless device that provides full control of any PC workstation and text input without using a mouse or keyboard.

In the clinical environment, directly at the dental chair, it allows real-time completion of clinical records through voice commands, ensuring effective internal communication and operational continuity.

## WHY IT SIMPLIFIES DAILY WORK

### EFFICIENTY

The clinician remains focused on the procedure, while communication between dentist, dental assistant and front office staff becomes smoother and more organized.

### PRECISION

Information is dictated and transcribed immediately, reducing the risk of errors or omissions in clinical record completion.

### HIGIENE

Eliminates the need to use a mouse and keyboard by hand, contributing to higher hygiene standards during clinical activity.

## FAST AND RELIABLE COMMUNICATION FLOWS

DENTIST ➡ PATIENT ➡ ASSISTANT ➡ FRONT OFFICE

## HOW IT WORKS

A pointer weighing just 10 grams, applicable to head caps, glasses or magnification systems, allows cursor control through head movements.

A foot pedal activates commands and voice dictation.

Information is transcribed in real time within the software already in use.

No installation required.  
Plug & play system.
